Space Inventory & Allocation System

A web-based application for an institution to collect information about the people, projects and use of a space.

Space Inventory & Allocation System - A web-based application that allows an institution to collect information about their spaces, from the departments that occupy that space, regarding the people, projects and utilization of that space throughout the previous fiscal year. This data is useful for a variety of planning and reporting purposes, including compiling data used in Indirect Cost Rate negotiations.
